

Whitespace Platform

Release Notes v3.4.5

Author: Tim Dedopulos
Date: 4th December 2025

Headlines

MTPC endorsement participants set to 'Non-Notify' and 'Does Not Apply' are no longer receiving notifications about those endorsements.

Integrators can successfully write a leader's line where the offer has been made using a custom amount when using the auto-cascade feature.

Resolved Issues

- When completing Mid-Term Participant Change endorsements, participants set to 'Non-Notify' or 'Does Not Apply' were incorrectly being sent notification emails informing them of the completion.
 - This has been corrected, and Non-Notify and Does Not Apply participants no longer receive any erroneous notifications.
- When a broker integrator used the API to show an auto-cascade declaration with customised line sizes that were different to the automatically calculated ones, an error was occurring downstream. This prevented the lead underwriter from writing their line, because the auto-cascade system was erroneously expecting a certain data object that is not typically associated with custom line size offers. The system then rejected the written line operation.
 - The incorrect data object requirement has been removed. Integrators can now show a declaration to a facility panel with custom line size offers, with or without auto-cascade activated, and the lead underwriter is correctly able to write the lead line without any issues.

Installation and Access Guide

iOS App

No update is required.

Browser

The Whitespace Platform on Browser updates automatically. If you are already logged in at the time of the update, you will see a notice requiring you to refresh the page.
