

Whitespace Platform

Release Notes v3.0.1

Author: Tim Dedopulos
Date: 11th December 2025

Headlines

A known issue affecting the visibility of stamps for bound participants on a sectioned declaration has been fixed. Following a brief disruption, users will now properly see logged-in colleagues in their Network pane again.

Release Details

- The outstanding known issue in v3.0.0 has been corrected.
Previously, notify and non-notify parties bound to later sections of a sectioned declaration did not have any visibility of any leaders' or other participants' stamps, regardless of stamp visibility settings.
This issue has been corrected, and now all participants on all declarations, sectioned or otherwise, correctly have visibility of their facility leader's stamp as well as any other stamps permitted by the declaration's stamp visibility settings.
- The Platform's 'Network' tab, accessed by clicking the overlapped 'Speech Bubbles' icon on the top bar, is now correctly showing all the available members of a user's Whitespace Community. All the usual communication options accessed through the 'Network' tab are available as expected.

Production Installation and Access Guide

Browser

The Whitespace Platform on Browser updates automatically. If you are already logged in at the time of the update, you will see a notice requiring you to refresh the page.
