Whitespace Platform v2.7.1

Author: Tim Dedopulos
Date: 28th September 2022

Headline

Information to definitively identify underwriters' stamps is now available via API.

New Features

- Identifying stamps via the API
    - New stamp identifier documents use market-recognised identifiers to definitively identify the organisations behind the stamps associated with a contract in the Whitespace database.
    - Hundreds of stamps used by underwriters on the Whitespace Platform have been fully back-populated with this data using the information contained within existing stamps. We are working to increase this coverage.
    - Stamp information can be readily recovered via the API system using the `GET /lines/$RootID/combinedSets` endpoint.
    - The data object identifying a stamp consists of the the following key-value pairs:
        - `category` to identify the originating market (eg. `"category":"LloydsSyndicate"`);
        - `categoryNumber` to specify the underwriter's market code (eg. `"categoryNumber":"1414"`);
        - `splitPercentage` is returned only if the stamp has a fixed split between multiple syndicates (eg. `"splitPercentage":"82%"`); and
        - `categoryExtra` is returned only if the stamp belongs to a Lloyd's syndicate or Lloyd's Brussels underwriter, and lists their three-letter pseudonym (eg. `"categoryExtra":"ASC"`).
    - Precise identification of stamp data increases clarity and facilitates integration with downstream systems, including accurate accounting and settlement processes.

Production Installation and Access Guide

iOS App
No update is required.

Browser
The Whitespace Platform on Browser will update automatically. If you are already logged in at the time of the update, you will see a notice requiring you to refresh the page.
